

Special Steel Plate As The Heating Furnace Base, Corrosion Resistance Plate etc

Includes: the boiler and pressure vessel steel, nuclear power plant with steel, high strength low alloy steel, quenched and tempered high strength steel, corrosion-resistant steel, bridge steel, structural steel, alloy structural steel, mold steel, wear-resistant steel, carbon structural steel, marine engineering equipment and ship steel, high strength and high toughness steel, oil and gas pipelines, fittings with steel, low welding crack susceptibility of high strength steel, composite steel and other 16 major series

Specifications: steel width 1500-4020mm, thickness 8-700mm, length 3000-27000mm.

Delivery status: According to user requirements, can be rolled, normalizing, tempering, normalizing plus tempering, quenching and other delivery.

Standard: According to user requirements, can be delivered the following criteria: national standards, metallurgical industry standards, American ASTM, ASME standards, Japanese JIS, German DIN, British BS, European EN, the international ISO standards and the standards specific board.

Grade: A, B, C, D, E, and the thickness direction of Z15, Z25, Z35.

Testing standards: in accordance with China (JB4730, GB / T2970), United States (A435, A577, A588), Japan (JISG0801, JISG0901), Germany (SEL072), Britain (BS5996), France (NFS04-305) and other well-testing standard production testing.

Fire cutting

Sand blasted
